Overview

Welcome to the Copyright for Dissertations guide from the University of Michigan Library Copyright Office. This guide addresses copyright questions specific to University of Michigan dissertation authors. It covers the following topics:

- Using Others' Content
- Plagiarism
- Copyright in Your Dissertation
- Publishing Your Dissertation
- Resources

For general information on copyright, please refer to the Copyright Basics guide.

The information presented here is intended for informational purposes and should not be construed as legal advice. If you have specific legal questions pertaining to the University of Michigan, please contact the Office of the General Counsel.

Using Others’ Content

Using Third-Party Materials in Your Dissertation

If you use material (such as text, images, sound recordings, etc.) created by a third party in your dissertation, you need to consider whether copyright law allows your use of those materials. In some cases, even reusing your own published articles may raise copyright concerns, if you have transferred away your copyright. Even when copyright permits your use of a work, contract law may prevent it. When you agree to terms of use in order to gain access to a copy of a work (such as a letter in an archive or a newspaper article in an online database), those terms also control what you can do with the work.

You can proceed without copyright permission if you are using something that is not copyrightable or is in the public domain, or if you are using it in a way that does not implicate one of the rights of copyright holders or is permitted by a user’s right, such as fair use. Information on these topics that is specific to dissertations can be found below. For more information on all of these topics, please see our Copyright Basics guide.

If none of the circumstances above applies, you need a license to use the work. In some cases, an existing license may cover your use. In others, you will need to get a new license. Information on these topics that is specific to dissertations can be found below. For more information, please see our guide to Obtaining Copyright Permissions.

Regardless of how you resolve the copyright issues, it is also vital to follow attribution norms within your discipline. For more information about the distinction between plagiarism and copyright and infringement, see the Plagiarism page of this guide.

Contracts at Libraries, Archives, and Museums

Some institutions require you to sign an agreement before accessing their collections. That agreement may limit your ability to use their materials. These agreements are valid even when the materials are in the public domain or using the materials would qualify as fair use. For instance, if you agree to get permission from the institution before publishing images of the materials, you are bound by that agreement.

To avoid trouble on this issue,

- Ask up front what the terms are and whether you can use the materials in your dissertation;
- Carefully read the terms of any agreements you sign; and
- Keep a copy of the terms, noting the materials to which they apply.
Fair Use in Dissertations

Fair use allows certain uses of copyrighted material without permission from the copyright holder. There are four factors to consider when determining whether your use is a fair one. You must consider all the factors, but not all the factors have to favor fair use for the use to be fair. The outline below explains how the fair use factors and their subfactors apply to using third-party material in a U-M dissertation.

First Factor: "The purpose and character of the use, including whether such use is of a commercial nature or is for nonprofit educational purposes"

- Having one of the favored purposes from the beginning of the fair use statute (17 U.S.C. § 107) will weigh in favor of fair use. Since uses in dissertations serve the purposes of scholarship and research, this favors fair use. It also favors fair use if the work is used for the purpose of criticism or comment.

- Having a nonprofit educational purpose will weigh in favor of fair use. Since uses in dissertations are for a nonprofit educational purpose, this favors fair use.

- Having a commercial nature will weigh against fair use. Most uses in dissertations are not for commercial purposes, but that may change if you publish your dissertation with ProQuest or another commercial entity.

- Having a transformative purpose will weigh in favor of fair use. One way of thinking about this is that a use is transformative when the work is used for a purpose different from the one for which it was prepared. For instance, suppose you are writing about advertisements aimed at children. You include a toy advertisement and analyze how it reached a child audience. That use of the advertisement would be transformative, because its original purpose was to increase demand for the toy. Quoting another scholar’s analysis of the advertisement would not necessarily be transformative, though it is still often fair use.

Second Factor: "The nature of the copyrighted work"

- If the work is creative, that will weigh against fair use. The outcome of this subfactor varies depending on the work used.

- If the work is factual, that will weigh in favor of fair use. The outcome of this subfactor varies depending on the work used.

- If the work is unpublished, that will weigh against fair use. However, the fair use statute explicitly states that the unpublished nature of a work will not bar fair use if the use is otherwise fair. The outcome of this subfactor varies depending on the work used.

Third Factor: "The amount and substantiality of the portion used in relation to the copyrighted work as a whole"

- Using all or much of the work will weigh against fair use. The outcome of this subfactor varies depending on the use.

- Using the most important part of the work (the "heart") will weigh against fair use. The outcome of this subfactor varies depending on the use.

- The third factor is neutralized if the amount used is necessary for a transformative purpose, even if the entire work is used. For instance, the third factor would be neutralized in the use of the toy advertisement described above.

Fourth Factor: "The effect of the use upon the potential market for or value of the copyrighted work"

- Decreasing demand for the original by providing a substitute will weigh against fair use. In many cases, using a work in your dissertation will not provide a substitute for the original, but the outcome of this subfactor can vary depending on the use.

- Decreasing demand for the original by criticizing it (as with a negative film review) has no impact on the fourth factor.

- If the licensing market for the use you are making is "traditional, reasonable, or likely to develop," that will weigh against fair use.

Resources on Fair Use

- **Fair Use Checklist** This checklist from the Columbia Copyright Advisory Office helps users consider the factors and subfactors of the fair use analysis.

- **Codes of Best Practices in Fair Use** These codes document the shared best practices of communities that rely on fair use, including fair use for online video, fair use of images for teaching, research, and study, fair use for OpenCourseWare, fair use for documentary filmmakers, fair use for the visual arts, and fair use for academic and research libraries.

- **Summaries of Fair Use Cases** This set of case summaries from Stanford is a good resource for learning about fair use law.

- **US Copyright Office Fair Use Index** This index of fair use cases is searchable by media format, case outcome, jurisdiction, and date. It is helpful for learning about legal precedents and judicial interpretation of the fair use doctrine.

Using Material Under an Existing License

This guide was prepared by the University of Michigan Library Copyright Office and was last revised in June 2017. It is licensed under the [Creative Commons Attribution 4.0 International license](http://creativecommons.org/licenses/by/4.0/).
Images licensed under Creative Commons licenses can be useful, particularly if you need a generic rather than specific image. Because the rights holder has already given everyone permission to use the image under the terms of the license, you do not need to evaluate fair use or seek permission in order to use it. A Creative Commons license makes it easy for you to know how you can use an image.

When you use a work licensed under one of the Creative Commons licenses, you need to comply with the license requirements (unless your use is otherwise permitted, e.g., by fair use). All Creative Commons licenses require attribution. However, the licenses are deliberately flexible about the requirements for that attribution. The Best Practices for Attribution are outlined on the Creative Commons wiki. Our guide to Creative Commons licenses has more information on this topic.

U.S. copyright law does not require citation in a particular form. However, following academic citation norms can help improve your fair use analysis. Check with your dissertation advisor for help figuring out what citation style you should use in your dissertation.

Plagiarism

Copyright Infringement & Plagiarism

Copyright infringement and plagiarism are related but distinct concepts. It is possible to plagiarize even when you have cleared permission for all the copyrighted works. Similarly, it is possible to infringe copyright even when you have given careful attribution. Scholarly authors pay attention to both proper citation and copyright when writing for publication.

- Plagiarism is using the work of another without attribution.
- Copyright infringement is any reproduction, distribution, modification, performance, or display of a copyrighted work without the permission of the rights holder that does not fall under fair use or another user's right. In the case of a work licensed under one of the Creative Commons licenses, using the work without giving attribution means you do not meet the legal conditions of the license.

Per the Rackham Dissertation Handbook (PDF),

Sources that must be cited include, but are not limited to:

- language or wording either taken directly or paraphrased from another source, whether published or not;
- concepts, interpretations, techniques, methods, test instruments or procedures borrowed or adapted from another work, whether published or not;
- charts, graphs or figures borrowed or adapted from another source, whether published or not;
- photographs, films, recordings, digital material or other images from another source; and
- data, surveys or results of any kind from any other inquiry or investigation.

Copyright in Your Dissertation

In the United States today, copyright protection automatically covers all new copyrightable works, including your dissertation. The moment the work is fixed in a tangible medium of expression, it is subject to copyright.

In the past, authors had to comply with certain formalities in order to obtain copyright protection. These formalities included registering the work with the US Copyright Office and placing a copyright notice on the work. Copyright law no longer requires that authors comply with these formalities merely to obtain copyright protection. However, registering a work and putting a copyright notice on a work still come with legal benefits, so authors often do these things anyway.

Copyright Notice

Under current US law, you do not have to provide a copyright notice on your work to receive copyright protection. However, if you are making your work publicly available, you may want to.

Putting a copyright notice (the copyright symbol ©, the year of publication, and the name of the copyright owner) on a work tells the rest of the world that the work is protected by copyright. If the copyright owner later sues someone for infringing her copyright in the work, she can point to the notice to show that the defendant is not an “innocent infringer” and thus may need to pay higher damages.

- Copyright Basics: US Copyright Office Circular 1 This PDF publication from the US Copyright Office explains the basics of copyright law, including copyright notice.

Copyright Registration

Under current US law, you do not have to register your work to receive copyright protection. You may want to register it anyway, because copyright registration comes with certain legal benefits. If the work is registered within three months of its publication date or before a particular infringement occurs, the copyright owner can recover statutory damages (monetary awards that need not be connected to actual harm suffered by the copyright holder) and attorney’s fees if she is successful in an infringement suit. Registration is also required before the author can bring a lawsuit about use of her work. However, because registration takes time and money, many works are never registered.

Registering a copyright is not difficult. For instructions and forms, visit the US Copyright Office website. If you have any questions regarding copyright registration, the US Copyright Office has a toll-free help line at 1-877-476-0778. You may register a work at any time while it is still in copyright.

Online registration for a single work of which you are the sole author costs $35. In all other cases, the online registration fee is $55. The fee for registering with a paper application is $85.

Registration by ProQuest

If you submit your dissertation to ProQuest, they will register copyright on your behalf, for a fee. The Rackham Graduate School encourages Ph.D. candidates to discuss this option with their advisors before selecting it.

Who Holds Copyright

Under US law, the initial copyright holder is the author of the work. In most cases, copyright law treats the creator(s) of the work as the author(s). If someone creates a work as an employee (or in certain cases, as a contractor), that person’s employer is considered the author of the work.

Who Holds Copyright in University of Michigan Dissertations

A University of Michigan dissertation author is the initial copyright holder for her dissertation. As a copyright holder, she has certain rights under copyright law. In the United States today, those rights can be separated and subdivided. The author can give others permission to exercise some or all of those rights. That is called a license. If the author agrees only to give that permission to one entity at a time, it is an exclusive license.

If an exclusive license lasts until the end of the copyright term, it is a transfer of copyright. To be valid, a copyright transfer must be in writing and must be signed by the rightsholder or the rightsholder’s agent. The recipient of a copyright transfer can then license or transfer the copyright.

In the academic context, licenses and transfers of copyright are particularly common in publishing agreements. In many cases, the author transfers all or part of the copyright in her publication to the publisher. The copyright holder may also choose to release the work under one of the Creative Commons licenses, particularly if she wishes to increase access to the work.
Publishing Your Dissertation

Preparing for Publication

Many dissertation authors publish their dissertations, in whole or in part. Norms around publishing dissertation material vary from one field to another. For instance, in some scientific fields, it is common to publish individual chapters from the dissertation before it is submitted. In the humanities, it is common to develop a monograph from the dissertation after completing the graduate degree.

Whether you publish before or after submitting your dissertation, it is important to plan ahead when signing publishing contracts or submitting your dissertation. Will the publishing contract you sign permit you to use the article in your dissertation later? How does depositing your dissertation in Deep Blue impact this? Can you use material that you’ve coauthored in your dissertation or thesis? Check with your advisors about norms in your field. With copyright questions, contact the library copyright office. The U-M Author's Addenda may help you to keep the rights you need when you publish your work.

From Dissertation to Book

Thinking about transforming your dissertation into your first book? There are a number of resources out there to help you understand the process of reworking a dissertation for publication as a monograph. It’s important to remember that almost no dissertations are ever published as a book without a significant amount of work on the author’s part to edit and refocus the manuscript for an audience beyond the dissertation committee.

In reading some of the resources listed above, you might encounter discussions of how having your dissertation available online (for example, in Deep Blue) could negatively impact a publisher's willingness to look at your manuscript. Some authors assert that you should not put your dissertation online if you hope to sign a publishing contract. However, please note there is very little evidence to support this view. In fact, research has shown that publishers will indeed consider manuscripts that are revised versions of openly-accessible dissertations [Ramirez, et al. (2013).
